Waiver No. 05-05-21
(RENEWAL) (1)

Town of Harpswell
Multi-Site Application for Pesticide Use Waivers

The Outdoor Pesticides Control and Fertilizer Use Ordinance provides that the Conservation Commission may grant a waiver for the use of pesticides that are otherwise restricted if certain conditions are met. An application for a pesticide use waiver must be completed by an applicator licensed by the Maine Pesticide Control Board. A licensed applicator may use this form to apply for waivers for **multiple properties** if all of the following conditions are met:

- The pesticide and concentration proposed to be used is the same for all properties
- The method of application will be the same for all properties
- The primary reason for requesting the waivers is the same for all properties – either an immediate threat to human health OR an immediate threat of substantial property damage

If those conditions are all met, complete the following information on this application form and provide the requested information for each property or site on the attached spreadsheet.

1. Applicator requesting the waivers: Jeffrey Gillis, WellTree Inc.
2. Pesticide and concentration proposed to be used: Acephate (97%) 15 Gram Ace-jet Pack. per 100 mL of water
3. Provide the following information about the pesticide(s) proposed to be used:
 - A. How long does it take for the pesticide to break down in the soil and in the ocean? N/A
 - B. How toxic is the pesticide to marine crustaceans, marine creatures, and land creatures? As applied, very low toxicity because it is injected directly into the tree.
 - C. If the pesticide is applied via injection, will residual levels be present in leaves or needles when they drop? Active ingredient breaks down in approx. one month in a tree
4. Proposed application method: Stem injection
5. The Conservation Commission must find that the following criteria are met to approve a pesticide use waiver. Please complete the following:
 - A. Describe why the control methods allowed in the ordinance are not adequate to address the threat – be specific: There are no effective sprays that can be used so close to the water.

B. Describe why the proposed approach for controlling the pest presents the least risk to the marine environment: because the product is injected directly into

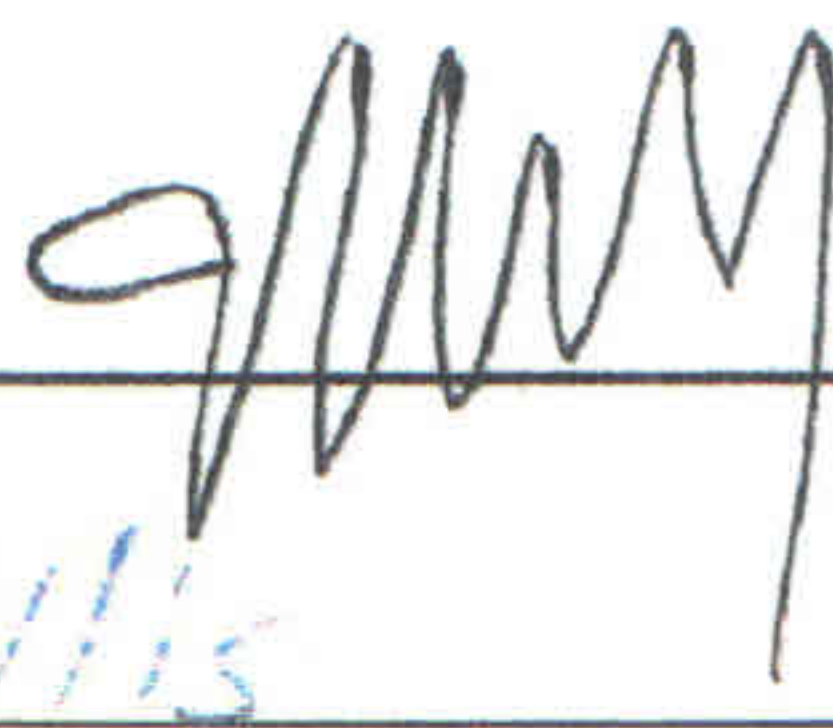

the tree, exposure to the surroundings is extremely limited.

3. Describe the measures that will be undertaken to limit the potential adverse impacts on the marine environment: _____

We will follow the label.
